Note: H - height from the floor: 0 - near the floor, 1 – 1.0 m from the floor, 2 – 2.0 m from the floor, 3 – 2.98 m from the floor.

L - location at the equal radii: N - north, E - east, S - south, W - west. ME - measured grain temperatures.

HL32 - grain temperatures predicted by HL32 (Headspace model + conduction model with L32 mesh).

HL32C- grain temperatures predicted by HL32C (Headspace model + conduction model with L32 mesh + convection current model).

HL84 - grain temperatures predicted by HL84 (Headspace model + conduction model with L84 mesh).

HL88 - grain temperatures predicted by HL88 (Headspace model + conduction model with L88 mesh).

HL88C- grain temperatures predicted by HL88C (Headspace model + conduction model with L88 mesh + convection current model).

Appendix E

Table Appendix E4 Measured and predicted grain temperatures (°C) in a 3.65 m diameter bin (the north bin) filled with wheat to a depth 3 m, located near Winnipeg, Canada

Table Appendix F1 Maximum value (°C) of the absolute differences between the predicted and measured grain temperatures at 0.45 m radius in the south (3.76 m diameter and 5.55 m height) and north (3.76 m diameter and 5.45 m height) bins filled with wheat to a depth of 3 m located near Winnipeg, Canada

Note: Height - height from the floor: 0 – near the floor, 1-1.0 m from the floor, 2 – 2.0 m from the floor, 3 – 2.92 m from the floor.

Location – the location at the equal radii: N – north, E – east, S – south, W – west.

HL32 (HL32C, HL84, HL88, and HL88C) - maximum value (°C) of the absolute differences between the measured temperatures and the temperatures predicted by HL32 (HL32C, HL84, HL88, and HL88C).

Table Appendix F2 Maximum value (°C) of the absolute differences between the predicted and measured grain temperatures at 1.1 m radius in the south (3.76 m diameter and 5.55 m height) and north (3.76 m diameter and 5.45 m height) bins filled with wheat to a depth of 3 m located near Winnipeg, Canada

Note: L1 = the first layer from the floor.

L2 = the second layer from the floor.

L3 = the third layer from the floor.

L4 = the fourth layer from the floor.

L5 = the fifth layer from the floor.

L6 = the sixth layer from the floor.

I% = insect percentage in the centre of the middle two layers. The percentage = (insect number in the centre of the middle two layers/total insects in the bin)×100%.

Note: Centre T = average temperature in the centre of the layers.

Boundary T = average temperature at the boundary of the layers.

L1 = the first layer from the floor.

L2 = the second layer from the floor.

L3 = the third layer from the floor.

L4 = the fourth layer from the floor.

L5 = the fifth layer from the floor.

L6 = the sixth layer from the floor.
